Ask the Motor Medics®

Automotive Advice from The Under the Hood® Show

Dear Motor Medics,
I have a 1994 Stealth RT without the turbocharged engine. I have gone through 2 new batteries in a short period of time. Is it possible that a failing alternator can ruin a battery? If so, I would like to know if there is a way to check if the alternator has actually failed. Are there specific testing methods that can be used to narrow the cause down? I listen to your show faithfully. Thanks for your time.

Thank you, Karen in Fargo

Dear Karen,
A failing alternator can ruin a battery in a short period of time. If it's overcharging or is draining current when off, it will discharge the battery after it sits for extended periods. Even if it does not sit long enough to run completely down it can cause the battery to fail due to its heavy discharge/charge cycles. To check the alternator, you need to have a charging system analysis done with a charging system tester. This will show the internal operation of the alternator, diodes, field, and ability to charge at idle and at higher rpm but will not show a drain. To find a drain they will need to perform is a current drain test. Most shops with this type of tool will also have an electronic battery testing tool. It is possible that you have had a run of bad luck with two bad batteries. It has happened to us in our shop before.

Take care, the Motor Medics.

Dear Motor Medics,
I drive a Ford F150 which I bought new in 2004. I have been hearing some news from other Ford owners in my area who have had some issues with cam phasers failing in their engines. My question is what should I be doing to give me the best chance at preventing this from happening to my engine? I drive the truck only a few miles to work every day and change the oil about every four months.

Thank you, Dean in Moberly Missouri.

Dear Dean,
The 5.4 has been used is hundreds of thousands of Fords without issue but a few have been known to develop issues with the cam phasers or lose just a bit of oil pressure which keeps the phasers from operating properly. Repairs involve phaser replacement or sometimes an entire engine. The best way to prevent this from happening is with routine oil changes. Ford recommends using their factory specified oil or something of better ratings and a Ford genuine filter. There are copies of this filter on the market so make sure you are getting the genuine Ford product. As for time intervals we would suggest changing the oil at three months. The short trips are harder on the oil and engine as the engine does not get up to operating temperature for a long enough period to completely burn off all traces of moisture in the oil which can result in sludge in the engine.

Take care, the Motor Medics.

City of Brandon Residents

FLUSHING NOTICE

The City of Brandon will be flushing water mains from Monday, May 23rd through mid-June 2022 or until flushing is complete.

Flushing hydrants is needed to ensure they are in proper working condition for fire protection and to remove any mineral deposits that may have accumulated in the water mains.

Residents should be advised that the change in water flow patterns resulting from hydrant flushing may stir up mineral deposits in home services.

During hydrant flushing, it is not uncommon for residents to periodically experience discolored water, pressure change, and/or an increased chlorine odor. Homeowners are advised to exercise care in their laundry operations and to check the water for clarity before use.

Motorists also are advised to stay clear of the streams of water coming from the hydrants.
